

# Day in the Life of Your Installers

The daily success of your field tech relies on having the right project information at the right time, all while making it easy for non-technical crews to see and use. Here's a glimpse of how their day is more successful with the Cilio CiO project management mobile app.

## 7:00 AM

Tech opens the CiO app on their phone, and with one tap, downloads the day's work.

## 8:00 AM

Taps the street view of the home to check it out, find parking, or see if they need the big ladder when loading up the truck. One tap sends the customer a text that they're on the way.

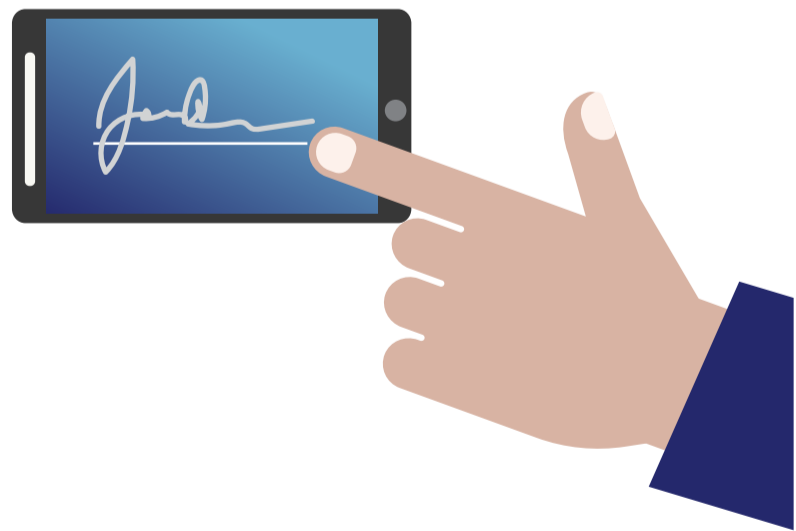

## 9:00 AM

Tech loses cell service while driving out to the remote area. No problem because every job detail is saved right in their phone/tablet to see even when offline.

## 1:00 PM

Photo of finished project is saved, and job signed off right on the tech's phone.

## 2:00 PM

Tech drives back into cell coverage. System auto-syncs so the office sees everything completed. Customer gets a feedback request and leaves you a 5-star review on Google.
